»» Sauter Group achieves CO<sub>2</sub> neutrality ahead of schedule.

Following the guidelines of the Greenhouse Gas Protocol, CO<sub>2</sub> emissions are registered systematically in a multi-stage process, while measures are developed and implemented to prevent them, or – if not otherwise possible – to offset them.

With **!target >> zero CO<sub>2</sub>**, the Sauter Group is making its own valuable contribution to the sustainable use of resources and the protection of our environment.

The Sauter Group has been climate neutral in terms of its CCF since midway through the first quarter of 2022.

Our ambitious project has three main phases:

- CO<sub>2</sub>-neutrality in terms of Corporate Carbon Footprint: CCF covers all CO<sub>2</sub> emissions by the Group.
- CO<sub>2</sub>-neutrality in terms of Product Carbon Footprint: PCF covers all amounts of CO<sub>2</sub> released during product manufacture.
- CO<sub>2</sub>-neutrality in terms of Life Cycle Assessment: LCA goes a step further and covers the impact of our products over their entire life cycle.
